

Tree Trimming

Trees are precious to us, but sometimes they pose a safety hazard if they're too close to power lines.

Here's what you need to know:

-  **Take precautions**
If you come across a tree that has fallen on a power line, call us immediately. At all times, keep children away from tree limbs that are close to power lines.
-  **Leave the trimming to professionals**
Our trimmers are trained in proper techniques and do their best to redirect growth while protecting the health of the tree.
-  **Plant with care**
Plant trees a minimum of six metres from power lines to accommodate for their full height and wind sway.

Give trees

8 metres

of clearance

Report a downed power line:

310-WIRE (9473)
